

Sound Level Monitoring Kits

Sound Monitoring Kits include everything you need to automatically monitor and log sound levels 24/7, providing accurate data for decision making.

Features include:

- Small, unobtrusive meters that deploy easily.
- Color-coded visual alerts prompt employees to modify noisy behaviors. Stealth mode disables visual alarms.
- Secure, cloud-based platform provides access to live monitoring data anywhere, on any smart device or desktop.
- Continuous data logging auto-generates Sound Target Achievement reports to ensure sound level goals are met.

Our kits are turnkey monitoring, alarming, and compliance reporting solutions for sound-sensitive environments, including patient care, industrial and/or manufacturing facilities, and neo-natal care.

Deploying SIM Kits provides accurate data to understand and manage sound levels, improve environmental conditions, and improve HCAHPS scores.

Why should I choose Sonicu?

Our system provides easy 24/7 access to your data on any smart device or desktop. Our components are simple to install and modular, so it's easy to scale up or down to match your requirements.

Sonicu Sound Monitoring Kits

Each Kit Includes:

SIM Sound Level Meter
3.9" x 3.9" x 2.1"

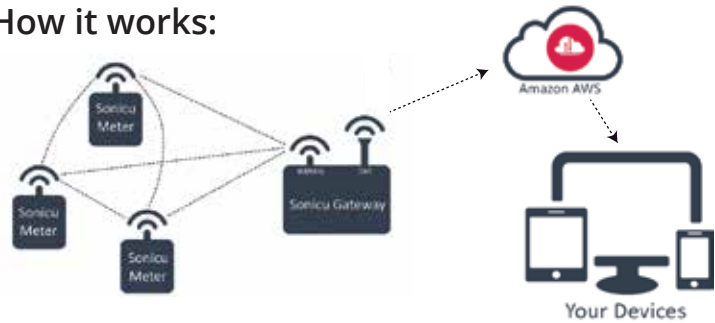

Gateway
5.1" x 3.57" x 1.573"

12v DC
power supply

How it works:

Sonicu SIMs aggregate sound data, transmit it to the cloud and provide a system-wide picture of your sound environment with real-time views and comprehensive Sound Target Achievement Reports.

Kit Choices – Select by connectivity option and number of SIMs required (3 or 5)

Each SIM provides sound monitoring at 1 location. Range: 35 dBA to 100 dBA. Order kits as needed.

Connectivity*	Kit No.	Description
WiFi - 3 SIMs	210003	3 SIM sound level meters, 1 gateway, 4 power supplies
4G LTE - 3 SIMs	212002	3 SIM sound level meters, 1 gateway, 4 power supplies
WiFi - 5 SIMs	210005	5 SIM sound level meters, 1 gateway, 6 power supplies
4G LTE - 5 SIMs	212005	5 SIM sound level meters, 1 gateway, 6 power supplies

*Ethernet and 900MHz kits are also available.

Applications

Sonicu SIM kits are designed for specifically defined operational areas with easy access to appropriate mounting locations and power sources.

For broader sound management applications such as hallways and wings or applications that require hardwired ceiling mounts, contact Sonicu for layout and design consultation and services.

Technical Notes

- Kits include easy-to-follow installation guides and online training videos. SIM sound level meters mount quickly, and live customer support is provided to all customers.
- An array of multiple SIMs can form a sound-sensing net throughout an entire enterprise that transmits system-wide sound data to a cloud-based software platform directly by Wi-Fi or, alternatively, by radio signal to a gateway, which then sends to the cloud via 4G LTE cellular or Ethernet. Custom dashboards allow sound to be seen in real time and Sound Target Achievement Reports chart sound-reduction progress.

- The secure SoniCloud platform is hosted on Amazon Web Services (AWS).
- Sensor-to-cloud data transmission requires no additional hardware or software.
- Data-Sync and onboard memory ensure all data is preserved in case of network interruption.
- Automated data logging and reporting eliminate manual data entry and streamline compliance.
